

CHANDRAMITA BHATTACHARYA

AI ENGINEER | AGENTIC APPLICATIONS & ENTERPRISE GENAI

Dachauer Str. 193, 80637 Munich | +49 1577 0971144 | chandramita.bhattacharya@gmail.com | [LinkedIn](#) | [GitHub](#)

SUMMARY

AI Engineer with an M.Sc. in Cognitive Systems, three years of enterprise software delivery and hands-on industrial experience building Python-based agentic applications for enterprise knowledge and business workflows. Strong experience integrating LLMs with tools, retrieval and structured outputs, supported by systematic evaluation, end-to-end observability and Angular engineering. Proven ability to combine AI engineering, enterprise software delivery and process modernisation to turn agentic prototypes into reliable business solutions.

TECHNICAL SKILLS

Agentic AI & GenAI: Python, LangGraph, LangChain, Deep Agents, MCP, RAG

Model Routing, Evaluation & Observability: LiteLLM, Langfuse, Ragas

Programming: Pydantic, PyTorch, pandas, NumPy, scikit-learn

Software & Frontend: REST APIs, JSON, Angular, TypeScript, JavaScript

Cloud & Engineering Delivery: Azure, Databricks, Docker, Git, CI/CD, Agile

WORK EXPERIENCE

Data & AI Engineer Intern | Liebherr Digital Center, Ulm

Jul 2025 - Present

- Developed an enterprise agentic knowledge assistant with Deep Agents, leveraging LangChain components and the LangGraph runtime, with LiteLLM for Azure OpenAI routing and Langfuse for end-to-end tracing across agent, tool, retrieval, and LLM calls.
- Built FastMCP tools for controlled, metadata-filtered retrieval over Mosaic AI Vector Search and benchmarked RAG pipelines for source-grounded engineering and QA knowledge.
- Curated evaluation datasets and compared OCR, preprocessing, chunking, embedding and retrieval strategies against Databricks AI Functions, analysing accuracy, latency and failures.
- Developed PyTorch-based document-intelligence and computer-vision pipelines with YOLO/YOLOX, SAM and PaddleOCR for technical drawings and industrial safety monitoring.

Associate - Technology Consulting | PricewaterhouseCoopers (PwC), India

Jul 2019 - Aug 2022

- Delivered production enterprise applications for international insurance and e-commerce clients using Angular, TypeScript, JavaScript, testing, debugging and Agile delivery.
- Modernised a legacy reconciliation workflow into a secure, role-based platform with validation, reporting and automated/manual workflows across multiple data sources.

SELECTED PROJECTS

Multimodal Content Evaluation - Text-to-3D Generative Models | M.Sc. Thesis (1.0)

- Designed an LLM-driven benchmark for six generative models, generating 90 shape/colour/style prompts and evaluating multi-view renders with four metrics across semantic alignment, plausibility and mesh quality; produced a reproducible dataset/codebase and a manuscript submitted to WACV 2026.

Controlled Email-to-ERP Agent Workflow | Python, Pydantic, OpenAI API, Deterministic Guardrails

- Built an auditable agentic workflow using Pydantic models and JSON schemas for email and PDF/Excel/PPT inputs with structured LLM extraction, ERP checks, prompt-injection detection, risk scoring, deterministic routing and human review.

EDUCATION AND ADDITIONAL INFORMATION

- M.Sc. Cognitive Systems, Ulm University, Germany | 2022-2026:** Grade 1.5 (Thesis 1.0)
- B.Tech Computer Science, Institute of Engineering and Management, Kolkata | 2015-2019:** Grade 8.7/10
- Languages:** English C1 | German B1 | Bengali native | Hindi fluent
- Earlier Internships:** Linde Global IT - UiPath/SAP ERP workflow automation; Philips Carbon Black - SAP Fiori process and usability analysis.
